Class A: Hydrants that on individual test usually have a flow capacity of 1,000 gpm or greater.

Class B: Hydrants that on individual test usually have a flow capacity of 500 to 1,000 gpm.

Class C: Hydrants that on individual test usually have a flow capacity of less than 500 gpm.

Capacities are to be rated by flow measurements of individual hydrants at a period of ordinary demand. When initial pressures are over 40 psig at the hydrant under test, the rating is to be based upon 20-psig residual pressure, observed at the nearest hydrant connected to the same main and when no water is being drawn. When initial pressures are less than 40 psig, residual pressures shall be at least half of the initial.

(2) The following is the capacity-indicating color scheme:

(a) Public hydrants. All barrels are to be painted chrome yellow, except in cases where another color is desired. The tops and nozzle caps of hydrants in the classes outlined in (1) are to be painted as follows:

Class A-green

Class B-orange

Class C-red

(b) Private hydrants. Within private enclosures, the marking is to be at the discretion of the owners. Private hydrants in public streets should be painted to distinguish them from public hydrants.

(3) All location markers for flush hydrants should carry the same color background as stated for class indication.

(4) The colors shall signify only the approximate capacity of the individual hydrant as tested alone, and not its capacity when more than one hydrant in the vicinity is in use. The marking of the hydrant is not to be considered as in any way guaranteeing the capacity indicated by the color.

(5) Pumper trucks are prohibited from connecting to Class C fire hydrants with red tops and caps, or fire hydrants with flows less than 500 GPM at 20 PSI. (1973 Code, § 7-208)
