

# Keeping Current

An update on Wisconsin's land  
and water natural resources  
programs and issues

February 1999

## Kids and spray paint...

**S**ounds like a bad idea, but it doesn't necessarily spell trouble, especially if it's part of a storm drain stenciling project. Volunteers in more than 100 Wisconsin communities have participated in programs to stencil "Dump no Waste, Drains to Lake (or Stream)" on more than 6,000 storm drain inlets.

The Water Action Volunteers (WAV), sponsored by UW-Extension and DNR, has released summary results of a 1998 Madison survey conducted to determine whether stenciled messages influenced

people's understanding of storm water issues. The survey looked at two neighborhoods; one had been stenciled and one had not.

"Stenciling activities do seem to increase recognition of one particular fact," notes WAV Coordinator Pam

Packer. "People have an increased awareness that storm drains discharge to nearby waterways." Of the people who had seen the message, 71 percent said they knew that storm drains lead directly to a waterway, while only 40 percent of those who had not seen the message knew that fact.

Interestingly, survey results show that the message on the curb raised awareness

of storm drains in a broader area than just the intended neighborhood. All respondents had difficulty remembering the specific location of the stenciled message, although most reported that they had seen it near their home. In fact, 67 percent of residents in the unstenciled neighborhood reported seeing the message near their homes, despite the absence of stenciled messages in their area.

While stenciling raises people's awareness, does it contribute to behavior changes?

"The survey results aren't clear on that point," says Packer, "but the message can enhance other storm water education programs and reinforce people already using environmentally friendly practices."

"The volunteer groups also benefit from annual stenciling campaigns," notes Packer, "and gain a sense of community involvement while contributing to environmental protection."

For copies of the survey summary or more information about the survey, storm drain stenciling projects and other WAV programs, contact Pam Packer ([ppacker@facstaff.wisc.edu](mailto:ppacker@facstaff.wisc.edu), 608/264-8949) or visit WAV on the web:

## Conservation on the land internships

College student interns help NRCS and LCD staff with CRP projects, nutrient management plans, wildlife plantings and other field work. Interns receive college credit and/or tuition scholarships for their summer work. A handbook with complete information about timelines, position descriptions and hiring procedures for Summer 2000 will be available in March. For more information contact Pat Murphy, NRCS, 608/276-8732 ext 258, or Kevin Erb, UWEX, 920/391-4610.

## Conservation standards available online

The Wisconsin Standards Oversight Council has recently revised a number of standards, including pond sealing or lining, wetland restoration, well decommissioning, manure transfer, and heavy use area protection. All NRCS technical standards and drawings are now available from the Wisconsin NRCS website:

[www.wi.nrcc.usda.gov/tech.html](http://www.wi.nrcc.usda.gov/tech.html)

## Advice for shoreland property owners

Wisconsin law places certain restrictions on changes to shoreland areas. Counties adopt these standards and sometimes pass more restrictive standards. Landowners can learn about their county's shoreland zoning laws at:

[www.dnr.state.wi.us/org/water/wm/dsfm/shore/county2.htm](http://www.dnr.state.wi.us/org/water/wm/dsfm/shore/county2.htm)

In April, DNR will have a publication with specific information about all county shoreland zoning ordinances. For more information contact Carmen Wagner, 608/266-0061

## NONPOINT HEARINGS

DNR informational meetings at 12:00 and 5:30 p.m., hearings at 1:30 and 7:00 p.m. at:

**March 13**  
Ullsvik Center  
UW-Platteville

**March 14**  
Western Wis. Tech. School  
La Crosse

**March 15**  
Fitchburg Community Center

Rhinelander; Rothwell  
Student Center, UW-Superior

# New proposals for nonpoint: a quick look

In late January, the DNR and DATCP boards voted to approve public hearings on new rules addressing nonpoint source pollution. The proposed rules signal a significant shift in Wisconsin's approach to controlling polluted runoff in urban and agricultural areas.

The cornerstone of the rules are proposed state-wide performance standards for both urban and rural areas (including manure management prohibitions). The performance standards will address soil erosion from croplands, streambanks and shorelines, manure runoff from barnyards and feedlots, sediment from construction sites, and polluted stormwater runoff from transportation facilities and developed urban areas. DNR will develop rules for the performance standards and prohibitions, and DATCP will develop rules to implement agricultural standards.

Implementation and enforcement will occur through local municipal or county ordinances with DNR having backup authority. County Land and Water Resource Management Plans will identify strategies to implement performance standards. Counties with demonstrated enforcement capability will receive priority for state cost-sharing.

The agricultural performance standards and prohibitions are enforceable only if cost-sharing is provided. Most municipalities and other non-agricultural operators would be held to the standards

regardless of whether there was state money to help them cover some of the cost of controlling the runoff. However, municipalities under 2,500 population would be required to meet the standards only if the state helped share the cost.

The proposed rules change the funding mechanism for local nonpoint efforts by creating a base level of funding for both program administration and installation of rural conservation practices and targeted funding to both rural and urban areas. The targeted funds would be used primarily for conservation practices. In addition, a clearinghouse would be established to match funding sources from participating agencies with specific projects to maximize funding of local and state priorities.

Both DATCP and DNR have scheduled public hearings and informational meetings regarding the proposed rule changes (see schedule at left).

For a copy of the DATCP rule (ATCP 50) and more information, call 608/224-4620. Deadline for comments is April 19.

The deadline for comments on DNR's rules is May 5. Send written comments or requests for information to Carol Holden, DNR, WT/2, P.O. Box 7921, Madison, WI 53707, phone (608) 266-0140, FAX: (608) 267-2800 (e-mail: [holdec@dnr.state.wi.us](mailto:holdec@dnr.state.wi.us)). For a copy of proposed DNR rules see:

[www.dnr.state.wi.us/org/water/wm/announce.html](http://www.dnr.state.wi.us/org/water/wm/announce.html)

## On the table:

### Comprehensive nutrient management planning

The USDA Natural Resources Conservation Service is developing technical guidance materials for nutrient management that take a step beyond traditional nutrient management plans. The traditional plans focus primarily on managing the amount and timing of nutrient applications.

Comprehensive nutrient management plans (CNMPs) would incorporate: animal outputs (manure/wastewater collection, handling, storage, treatment, transfer); evaluation of land application sites; land application; records of CNMP implementation; inputs to animals; and other waste utilization activities or options.

The technical guidance document would not establish regulatory requirements for government programs, but would be used by NRCS staff, local field staff, consultants and landowners in developing CNMPs.

NRCS is also developing tools that will help build capacity for CNMP development, including software for nutrient management planning and animal waste

management, training in development of CNMPs, guidance for state certification programs, and sample CNMPs animal types and regions.

For more information contact Obie Ashford (301/504-2197, [obie.ashford@usda.gov](mailto:obie.ashford@usda.gov)). The federal register version of the draft guidance document is available at:

<http://www.nhq.nrcs.usda.gov/PROGRAMS/ahcwpd/ahCNMP.html>

Some new publications...  
...and some older ones you might have missed

In the past we've used Keeping Current as other materials of interest to folks working in Wisconsin and water resources education programs. But since we haven't published Keeping Current in some months, you might not be aware of some newer

publications like the Natural Resources Conservation Service's "Choices" fact sheet series

which focuses on an issue of increasing concern - maintaining lakes and reservoirs

Developed by the Wisconsin Lakes Part-

nership and Basin Education Programs,

these series focuses on an issue of increas-

ing development pressure. Two fact sheets can

also be viewed and printed at:
